

Visual OPCTest Client 8.2 Source Code Offer Guide

Non-exclusive access to source code, help project and sample scripts. We give you the ultimate control of your OPC server testing, verification, validation, and support. Please read this guide before making the purchase.

What is being offered:

Visual OPCTest Client non-exclusive access to source code

- Visual C++ 6.0 project with all the source, header, and resource files
- Help project files
- Sample scripts (.otx) files

Free Technical Support

- 8 hours of free technical support covering project setup. Help is limited to answering general questions on the project layout and compilation of the binary files. Email-based tech support only.

Consulting and Custom Modifications

- Priority consulting in customizing the software to your needs. Additional fee will apply if you require quickly changes to the program per your instructions. We will start with a SOW to determine the consulting fee. Our hourly fees are very competitive.

Limitations of the non-exclusive agreement:

You have non-exclusive access to the source code for internal company use only.

You may not distribute or give away the source code in any form.

You may not give away or resell the binary executable, unless royalty agreement is in place.

You may modify all, some, or none of the source code just the way you need it for your internal use.

How the purchase process works:

Step 1.

You place an order on-line (no POs) as you would for any standard license. This will generate LicenseID and Password. It will also provide us with your name, email, and company affiliation. We will verify credit card and payment information before proceeding any further.

Step 2.

We will update source code and help project with your company information. Compile and test it.

Step 3.

We will create a password protected zip file with the source code, help files, and sample scripts. The password used will be the one you provided us in Step 1.

Step 4.

We will notify you by email of the download link where to get the zip file. Exchange will then be concluded and you still have 8 hours of free tech support to get you started. It should take no more than 1 business day between Step 1 and Step 4.
